

# Understand Your Data

DataCrux Insights @2018 All Rights Reserved

## Types of Data Sources

- **Primary** The data collector is the one using the data for analysis
- **Secondary** The person performing data analysis is not the data collector

DataCrux Insights @2018 All Rights Reserved

## Data formats

- Structured
- Unstructured

## Types of Variables

- Nominal
- Ordinal
- Interval
- Ratio

## Quantitative Data

- Described by a number
- Discrete or continuous
- Using operations such as average make sense

**ATM Withdrawal**

**Number of employees  
in a company**

**Time**

DataCrux Insights @2018 All Rights Reserved

## Discrete Data

- Discrete data can assume only certain values.
- Typically, this type of data can be counted.

**Number of bedrooms**

**Number of cars  
passing a toll booth**

**Number of children in  
a family**

DataCrux Insights @2018 All Rights Reserved

## Continuous Data

- Can take any value in a specific range.
- Outcome of measuring.

**Time to reach school**

**Weight of tomatoes**

**Height of a student**

DataCrux Insights @2018 All Rights Reserved

## Qualitative/Categorical Data

- Also known as categorical data
- Describes data that fits into categories
- Take on values that are names or labels

Gender

Color of ball

Nationality

## Levels of measurement

- Determines how data should be summarized and presented.
- Indicate type of statistical analysis to be used
- Also known as scales of measurement

DataCrux Insights @2018 All Rights Reserved

## Levels of measurement :

- ✓ Nominal : used to **assign** individuals/objects to **categories**
- ✓ Ordinal : used to rank **order** cases
- ✓ Interval : measurable, equally spaced, does **not have a true zero**
- ✓ Ratio : same as interval variable but they have a "**true zero**"

# Variables

- Variable is a particular characteristic of data that can be observed and measured/counted.
- A variable can assume different values.
- e.g. Height, Weight, Gender
- 2 types of variables:
  - Independent variable:
  - Dependent Variable

DataCrux Insights @2018 All Rights Reserved

## Variables / features

### Independent variables

- Variable which stands alone
- Values are not affected by other variables

- ✓ Predictor
- ✓ Explanatory
- ✓ Control
- ✓ Input

### Dependent Variables

- ✓ Response
- ✓ Outcome
- ✓ Target
